

### Irrigation

Waterwise Solutions specialise in the design, supply and installation of first class irrigation systems, offering a complete one stop shop, from initial consultation through to installation and handover.

We are full members of the British Turf and Landscape Irrigation Association, our Business Development Manager, Richard Owen, being their current Chairman.

Waterwise solutions supply and install Hunter Irrigation products which, we feel, are among the best available. All products are of the highest quality and their range enables us to cover the majority of irrigation system requirements.

#### Landscape Irrigation

The most efficient irrigation systems start with a professional design. We design systems from large commercial landscape areas to the small garden.

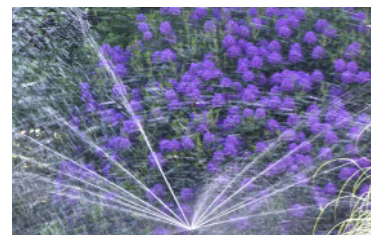

System control can vary from a simple time switch to full automation. The latter can include operation with a weather station, the system only operating to suit weather conditions.

From a site plan, provided by the client or prepared ourselves, and discussions with the client we are able to produce a detailed system design. This will provide information on water consumption, running times and full detail of equipment required. Coupled to this is a quotation for work involved which will detail exactly what we will do and what is required from other contractors or suppliers.

Once installed we ensure the client is fully conversent with the system control and its operation, so maximum benefit will be achieved.

### Sportsturf Irrigation

The staff at Waterwise Solutions have over 50 years combined experience in sportsturf irrigation. Areas covered include golf courses, sports pitches, bowling greens, race courses and cricket grounds.

#### Golf

Irrigation systems were first installed on golf courses some 40 years ago. Today's technology and quality of design has improved beyond all recognition from those early days. Some of the older systems now require updating and we can provide you with a range of options to suit your requirements, from standard systems to PC control. We stock a wide range of fittings for repairs too.

#### Sports Pitches

With growing demand for high quality sports surfaces, a modern irrigation system is an essential management tool for any Head Groundsman.

We can design systems from self travelling sprinklers to automatic pop up sprinkler systems.

### Rainwater Harvesting

In this age of global warming it is essential to make the maximum use of water. At Waterwise Solutions we were among the first contractors to design and install rainwater harvesting systems for irrigation.

It is important to realise just how much water is needed for irrigation. For example, a 1,000m<sup>2</sup> area needs just under 4,000 litres per day in dry times. Where rainwater storage tanks exist we find them, in a majority of cases, to be of insufficient capacity, so please contact us for advise.
